        id[dfs_time] = u;
        tour[dfs_time++] = start[u];
    }
}

int LCA(int u, int v){
    if(start[u] > start[v]) swap(u, v);
    return id[min(tour[k] for k in [start[u], start[v]])];
}

```

## Burnside's Lemma

Let  $(G, \oplus)$  be a finite group that acts on a set  $X$ . It should hold that  $e_g * x = x$  and  $g_1 * (g_2 * x) = (g_1 \oplus g_2) * x, \forall x \in X, g_1, g_2 \in G$ . For each  $g \in G$  let  $X^g = \{x \in X \mid g * x = x\}$ . The number of orbits its given by:

$$|X/G| = \frac{1}{|G|} \sum_{g \in G} |X^g|$$

## Wilson's Theorem

$(n-1)! \equiv -1 \pmod n \iff n$  is prime

## Fibonacci

- $F_{n-1}F_{n+1} - F_n^2 = (-1)^n$
- $F_{n+k} = F_kF_{n+1} + F_{k-1}F_n$
- $\text{GCD}(F_n, F_m) = F_{\text{GCD}(n,m)}$
- $F_n = \frac{(\frac{1+\sqrt{5}}{2})^n - (\frac{1-\sqrt{5}}{2})^n}{\sqrt{5}}$

## Kirchhoff's Theorem

Laplacian matrix is  $L = D - A$ , where  $D$  is a diagonal matrix with vertex degrees on the diagonals and  $A$  is adjacency matrix.

The number of spanning trees is any cofactor of  $L$ .  $i$ -th cofactor is determinant of the matrix gotten by removing  $i$ -th row and column of  $L$ .

## Multigraphs

In  $D[i][i]$  all loops are excluded.  $A[i][j]$  = number of edges from  $i$  to  $j$ .

## Directed multigraphs

$D[i][i]$  = indegree of  $i$  minus the number of loops at  $i$ .  $A[i][j]$  = number of edges from  $i$  to  $j$ .

The number of oriented spanning trees rooted at a vertex  $i$  is the determinant of the matrix gotten by removing the  $i$ th row and column of  $L$ .

## Edge coloring

**Data:** A graph  $G$

**Result:** A proper coloring  $c$  of the edges of  $G$

Let  $U := E(G)$ ;

**while**  $U \neq \emptyset$  **do**

    Let  $(u,v)$  be any edge in  $U$ ;

    Let  $F[1:k]$  be a maximal fan of  $u$  starting at  $F[1]=v$ ;

    Let  $c$  be a color that is free on  $u$  and  $d$  be a color that is free on  $F[k]$ ;

    Invert the  $cd_u$  path;

    Let  $w \in V(G)$  be such that  $w \in F, F' = [F[1]...w]$  is a fan and  $d$  is free on  $w$ ;

    Rotate  $F'$  and set  $c(u,w)=d$ ;

$U := U - (u,v)$ ;

**end**

## Notes

When we repeat something and each time we have probability  $p$  to succeed then the expected number of tries is  $\frac{1}{p}$ , till we succeed.
